Forward-Looking Statements

This presentation is an overview of Firefly Neuroscience Inc. (the “**Company**”) for information purposes only and should not be relied on for the purposes of making an investment decision. This presentation does not, and it is not intended to, provide any financial, legal, accounting, or tax advice, and must not be relied upon by you in that regard. The presentation should not be used, or relied upon by you, as a substitute for your independent research or consultation with your own financial, legal or tax advisors. There are significant risks associated with an investment in the Company.

The information contained in this document has been provided by the Company or obtained from publicly available sources or third party reports and has not been independently verified. No representation or warranty express or implied is made as to, and no reliance should be placed on, the fairness, accuracy, completeness or correctness of the information or any opinions contained herein and nothing in this presentation is, or shall be relied upon as, a promise or representation by the Company. It is not the intention to provide, and you may not rely on these materials as providing, a complete or comprehensive analysis of the Company's financial or trading position or prospects. The information and any opinions presented herein are provided as at the date of this document based on general information gathered at the time of writing and are subject to change without notice. None of the Company nor any of its affiliates, advisors or representatives shall have any liability whatsoever (in negligence or otherwise) for any loss howsoever arising from any use of these materials or its contents or otherwise arising in connection with this document.

This document and any related oral presentation does not constitute an offer or invitation to subscribe for, purchase or otherwise acquire any securities or other debt instruments of the Company and nothing contained herein or its presentation shall form the basis of any contract or commitment whatsoever, nor does it constitute a recommendation regarding the securities of the Company.

All dollar amounts stated in this Presentation are expressed in Canadian currency, except where otherwise indicated.

FORWARD-LOOKING INFORMATION & FORWARD-LOOKING STATEMENTS CAUTIONARY STATEMENT

This presentation contains forward-looking information relating to capital expenditures, cash flow, investment payouts, valuations, and other matters (“forward-looking statements”). These statements relate to future events or future performance. Forward-looking statements are often, but not always, identified by the use of words such as “anticipate”, “budget”, “plan”, “estimate”, “expect”, “forecast”, “may”, “will”, “project”, “potential”, “target”, “intend”, “could”, “might”, “should”, “believe” and similar expressions.

Forward-looking statements are based on the opinions, assumptions and estimates of management at the date the statements are made, and are subject to a variety of risks and uncertainties and other factors that could cause actual events or results to differ materially from those anticipated in the forward-looking statements. Although management believes that the expectations reflected in the forward looking statements are reasonable, there can be no assurance that such expectations will prove to be correct. These statements are not guarantees of future performance and involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in the forward-looking information or forward-looking statements.

The Company cannot guarantee future results, level of activity, performance or achievements and there is no representation that the actual results achieved will be the same, in whole or in part, as those set out in the forward-looking statements. The forward-looking statements contained in this presentation are expressly qualified by this cautionary statement. We undertake no obligation to update or revise publicly any forward-looking statements except as required by applicable securities legislation.

The forward-looking statements made herein relate only to events or information as of the date on which the statements are made. The reader is cautioned not to place undue reliance on forward looking statements.

Executive Summary

Why Now?

Achieved **FDA 510k** clearance

Inflection point, on the cusp of commercialization

Assessed over **2,800 patients**

Breakthrough AI Neuro-Technology

Largest **standardized, multi-task EEG & ERP** database

Validated by clinical collaborations with **Takeda & Novartis**

15+ years building database in over 100 sites

World Class Management

Jon Olsen, CEO, 25+ years Medtronic & Smith and Nephew

David Johnson, Chairman, CEO of ConvaTec (**\$5b exit**)

David DeCaprio, Director, **#1 CMS AI Healthcare**

Danelle James, VP Clinical Development, led global development of Imbruvica (**\$21b exit to Abbvie**)

Leadership Team

Jon Olsen
CEO

- 25+ years of **global experience** in senior roles
- Managing Director Smith and Nephew (NYSE:SNN)
- Senior Director, Cardiac & Vascular Group at **Medtronic** (NYSE:MDT)

David Johnson
Chairman

- 35+ years of leading companies in the Medical Device Space, both Public and Private
- **CEO of Convatec**, a **\$5.0B** Medical Technology Company
- **Board of AdvaMed**, World's Largest Trade Association for Medical Technology Companies

Dave DeCaprio
Director

- Co-founder ClosedLoop.ai. (Voted **#1 AI** Software Solution for Health Care '23/'22)
- **Winner** of the **CMS Artificial Intelligence in Healthcare** Challenge (#1 of 300 companies including IBM, McKinsey, Microsoft)
- Engineering lead for the **Human Genome Project** at the Broad Institute of **MIT** and **Harvard**
- BSc Electrical Engineering, **MIT**

Danelle James
VP of Clinical Development

- Clinical development, scientific, medical affairs leader through multiple biotech companies
- **Led global development** of **Imbruvica** (first BTK inhibitor) from first in human to 15 global registrations for 10 years spanning Pharmacyclics **acquired** by **Abbvie (\$21 billion)**
- Hematologist and medical oncologist, formed UCSD faculty, **published 50+ articles** in peer reviewed journals

FDA 510k Labeling for BNA™

"The Brain Network Analytics (BNA™) Product is to be used by qualified medical professionals for the post-hoc statistical analysis of the human EEG, including event-related potentials (ERP).

This device is indicated for use in individuals 12 to 85 years of age.

The BNA™ Product is to be used with established testing tools (Auditory Oddball, Visual Go No-Go (age range of 25 to 85 years), and Eyes-Closed tasks)."

Abstract

Objective

The purpose of this study is to explore the possibility of developing a biomarker that can discriminate early-stage Parkinson's disease from healthy brain function using electroencephalography (EEG) event-related potentials (ERPs) in combination with Brain Network Analytics (BNA) technology and machine learning (ML) algorithms.

Background

Currently, diagnosis of PD depends mainly on motor signs and symptoms. However, there is need for biomarkers that detect PD at an earlier stage to allow intervention and monitoring of potential disease-modifying therapies. Cognitive impairment may appear before motor symptoms, and it tends to worsen with disease progression. While ERPs obtained during cognitive tasks performance represent processing stages of cognitive brain functions, they have not yet been established as sensitive or specific markers for early-stage PD.

This article was submitted to Public Mental Health, a section of the journal Frontiers in Psychiatry

Background: Digital technologies have the potential to provide objective and precise tools to detect depression-related symptoms. Deployment of digital technologies in clinical research can enable collection of large volumes of clinically relevant data that may not be captured using conventional psychometric questionnaires and patient-reported outcomes. Rigorous methodology studies to develop novel digital endpoints in depression are warranted.

15q13.3 microdeletion syndrome causes a spectrum of cognitive disorders, including intellectual disability and autism. We assessed the ability of the EEG analysis algorithm Brain Network Analysis (BNA) to measure cognitive function in 15q13.3 deletion patients, and to differentiate between patient and control groups. EEG data was collected from 10 individuals with 15q13.3 microdeletion syndrome (14–18 years of age), as well as 30 age-matched healthy controls, as the subjects responded to Auditory Oddball (AOB) and Go/NoGo cognitive tasks. It was determined that BNA can be used to evaluate cognitive function in 15q13.3 microdeletion patients. This analysis also significantly differentiates between patient and control groups using 5 scores, all of which are produced from ERP peaks related to late cortical components that represent higher cognitive functions of attention allocation and response inhibition ($P < 0.05$).

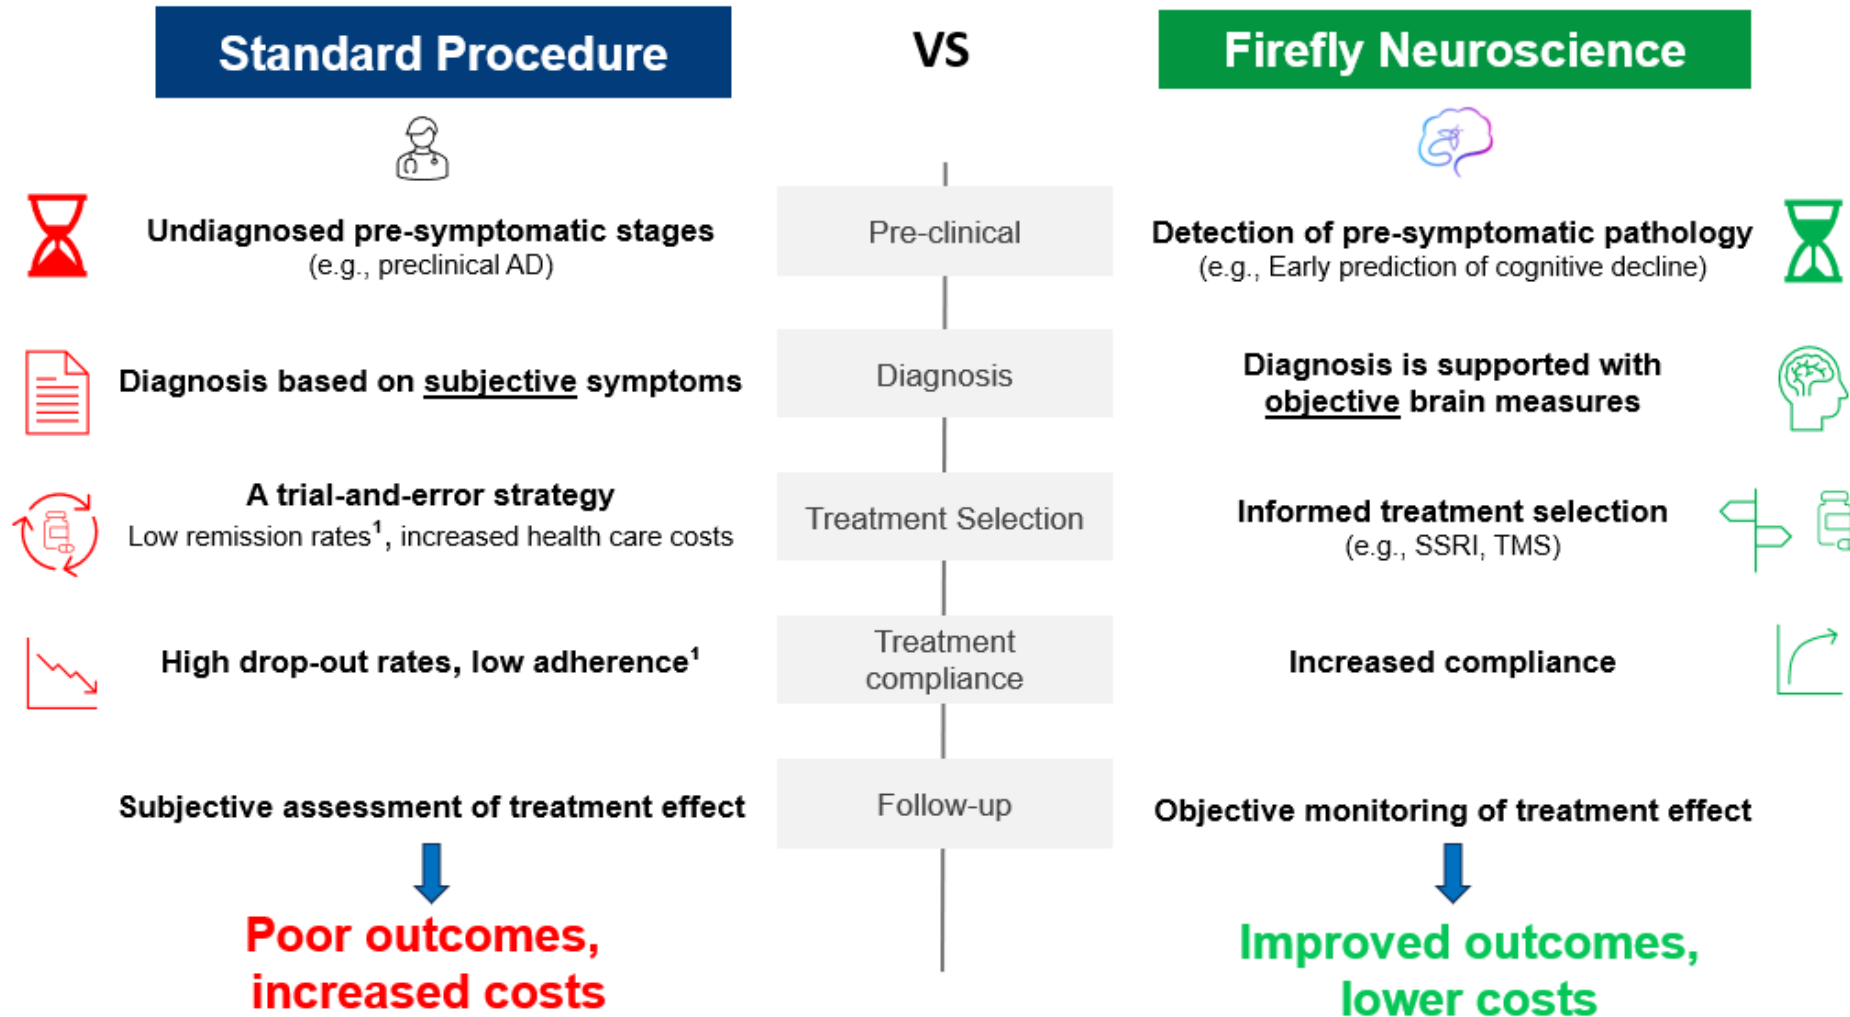

Keywords: 15q13.3, microdeletion, *CHRNA7*, ERP, auditory oddball, Go/No-Go, EEG, brain network analytics

Testimonial - Delray Center for Brain Science

“We’re able to get information right away, information that we never had before, and we can see at the neurophysiologic functional level of the brain [and] how that brain is firing.

That really helps guide us in terms of what condition are we dealing with, what are the complexities of this case, what is unique about this case, how might we cater this person’s treatment to help their particular case based on both what they report and based on also what we see now on the BNA™ report.”
